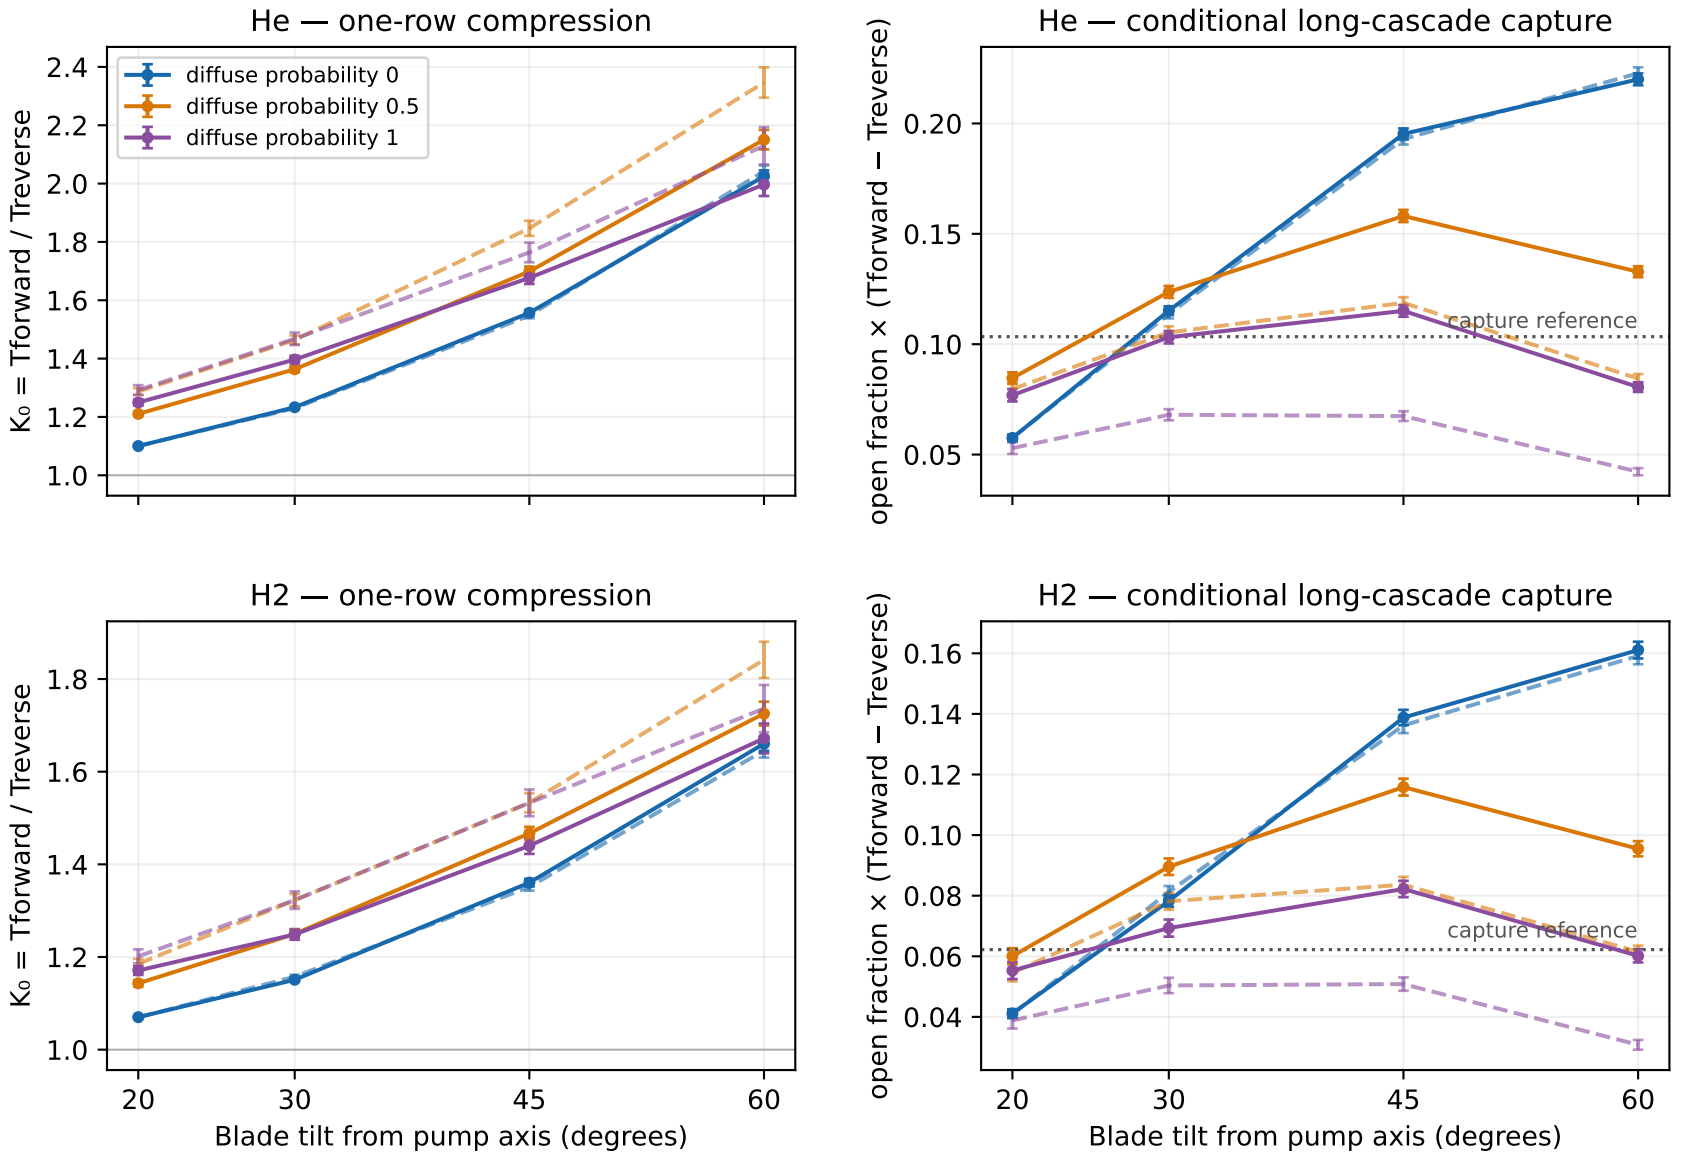
Moving angled blades at 700 m/s and 1000 K

Gap/pitch = 0.65. Solid: axial length/pitch 1. Dashed: 3. Error bars: 95% Monte Carlo sampling.



100,000 molecules per direction per point. Stationary Maxwellian interstage reservoirs are assumed for cascade capture.
An actual stator/thermalization and bypass design is still required; these are unit-cell results.
